

BoXZY Console (Personal Computer) Specifications

BoXZY Console - PC Recommended Specifications	
Form Factor	Any PC will work. A laptop may be preferred as it is both compact and mobile.
Mouse	Any mouse will work. An external mouse may be preferred to a trackpad when used for graphical design programs, but the preference is entirely a personal one.
Age	Any contemporary Windows-ready computer.
Operating System	Windows 10
Hard Drive capacity	Most contemporary PCs offer at least 250GB which is great. Bear in mind that graphics and design files can be large and plan drive space accordingly.
RAM	Most contemporary PCs offer at least 4GB RAM. Bear in mind that graphics-intensive applications perform best with lots of RAM. More is better if you will use the PC for design and graphics work.
Graphics Card	Most contemporary PCs offer a graphics card that's suitable for basic gaming, which will work fine for our purposes.
USB	At least 2 (two) USB 2.0-or-better ports: one for BoXZY, and one for a wireless mouse if you elect this type of pointer.
Internet connectivity	Must have, wired or wireless, for use with online design programs like Tinkercad (3D Print file) or Easel (CNC milling files), or just downloading files others have created.
